FINDINGS

JUNE 1, 1987

Land Use Regulation Commission

MAINE DEPARTMENT OF CONSERVATION

MAINE WILDLANDS LAKE ASSESSMENT

- Findings -

June 1, 1987

This report presents the findings of the Maine Land Use Regulation Commission's Wildlands Lake Assessment. It may be revised based on field checking of land use and resource information submitted to the Commission during the public comment period on the preliminary findings.

The detailed information which substantiates these findings is being incorporated into a computerized lake information system. Using this system it will be possible to retrieve detailed natural resource and land use information pertaining to any of the 1,500 lakes included in the project.

A description of the process used to conduct the Lake Assessment is included in the Maine Wildlands Lake Assessment Work Plan available through the Commission.

For additional information regarding this project, please contact:

Fred Todd, LURC Planning Supervisor
Drew Parkin, Project Consultant

I. PROJECT OVERVIEW

The Maine Wildlands Lake Assessment was initiated by the Land Use Regulation Commission in order to strengthen the Commission's ability to make informed decisions regarding the protection and use of Maine's precious lake resources. The Lake Assessment has:

- (1) Created a reliable base of natural resource and land use information which will be available to the Commission and others and which could provide input into a host of activities pertaining to the management of lakes within Maine's wildlands;
- (2) Identified the least accessible undeveloped lakes with exceptional resource values which merit policy consideration to maintain their existing values;
- (3) Identified those accessible undeveloped lakes with especially high values which merit special management considerations; and
- (4) Identified those lakes that are potentially the most suitable for development.

All lakes within the Commission's jurisdiction with a size of 10 acres or greater were included in the Lake Assessment. One half of the 3,000 plus lakes in the unorganized townships met this criterion. The project had two major analytical components. The first component, and the foundation of the entire effort, was an extensive assessment of lake related natural resource values. The second component was an assessment of the land use characteristics of these lakes.

The Land Use Regulation Commission was assisted in this undertaking by a number of agencies including the Departments of Inland Fisheries and Wildlife, Conservation, and Environmental Protection, the Maine State Planning Office, the Maine Historic Preservation Commission, and the National Park Service. An advisory committee with representation from State agencies, environmental organizations, and major landowners provided advice and reviewed project findings.

Included within this report are working lists of lakes in each of the above categories. In the future, these working lists may change as new information becomes available.

The next step is for the Commission to consider the actions that should be taken to shift development pressures among lakes to protect those with exceptional resource values and to guide development toward those that are most suitable for development.

II. THE NATURAL RESOURCE ASSESSMENT

A. Resource Category Assessment Process

The natural resource assessment component of the project was composed of separate yet concurrent evaluations of resource significance for seven distinct resource categories:

- Fish
- Wildlife
- Scenic Quality
- Shoreline Character
- Botanic Features
- Cultural and Historic Features
- Physical Features (Geology and Hydrology)

For each resource category a unique assessment process was developed which reflected both the nature of the resource and the type of information available. The evaluation itself was conducted by experts from appropriate State agencies with staff support from the Commission and the National Park Service.

The project emphasized the use of existing information and expertise to the extent possible. In two areas, scenic quality and shoreline character, existing information was insufficient. In these cases, field inventory was employed.

While each of the seven resource categories was assessed independently, findings were all reported in a like manner. For each, lakes were identified which had resource values which were either:

1. "Significant" - i.e., met a predetermined minimum standard of significance, or
2. "Outstanding" - i.e, clearly of Statewide importance due to unique or otherwise noteworthy characteristics.

For each resource category, a number of lakes failed to make either the "significant" or "outstanding" rating. These lakes either did not possess a given resource value or the available information was insufficient to make any determination.

A summary of findings follows:

Resource Category Findings

<u>Category</u>	<u># of Lakes Eligible</u>	<u># Rated Significant</u>	<u># Rated Outstanding</u>
Fisheries	1511	587	157
Wildlife	1511	135	85
Scenic Quality	1511	166	118
Shore Character	1511	132	30
Botanic Features	1511	13	44
Cultural Features	1511	152	37
Physical Features	1511	98	62

B. Resource Classification Method

Following this assessment, ratings were combined from all seven resource categories for each of the 1,500 plus lakes. Lakes were then ranked according to their "cumulative" resource significance.

The classification method used to accomplish this task and the findings which resulted are as follows:

RESOURCE CLASSIFICATION METHOD

Value Class 1 -- lakes of statewide significance

- A. Lakes of statewide significance with multiple outstanding natural values (two or more outstanding values)
- B. Lakes of statewide significance with a single outstanding natural value (one outstanding value)

Value Class 2 -- lakes of regional significance (with no outstanding values but at least one significant resource value)

Value Class 3 -- lakes of local or unknown significance (either had no significant or outstanding natural value or information was inadequate to make a determination)

Note that 4 or more "significant" values equalled an additional "outstanding" value for purposes of this classification.

It should be pointed out that these ratings are in fact minimum ratings. It is understood that complete information concerning the resource values for many lakes is not presently available and, if it were, many of these lakes might receive a higher value class rating.

RESOURCE CLASSIFICATION FINDINGS

	<u># of lakes</u>
Value Class 1A	123
1B	207
Value Class 2	583
Value Class 3	<u>598</u>
	1,511

III. THE LAND USE ASSESSMENT

The lists of lakes requested by the Commission required land use as well as natural resource information. To complement resource assessment information, an inventory of relevant land use characteristics was conducted. Information was collected from a variety of sources including LURC files and land use maps, DEP computerized water quality files, DIFW's computerized lake survey files, and The Maine Atlas. Information collected included:

Physical Character - depth, surface area, and shore length

Access - distance from the lake to a two wheel drive road (in 1/8 mile increments)

Shoreline Development - number and types of development

Zoning - existing P-RR (Remote Recreation Protection Subdistricts), P-FW (Fish and Wildlife Protection Subdistricts), P-WL (Wetland Protection Subdistricts), and development zones

Public Ownership - Bureau of Public Lands ownership, Bureau of Parks and Recreation boat access points

Water Level Fluctuation - dam regulated water bodies (including the extent of fluctuation)

Municipal Water Supplies - lakes used as potable water for communities

Location/Proximity to Services - distance from organized townships or substantial commercial facilities

This phase of the project also included an analysis of water quality factors which might limit shoreline development. This analysis relied on DEP water quality limiting models and available hydrological information.

Some of the land use findings were as follows:

A. Shoreline development

1. Lakes with no residential development: 1165
2. Lakes with a development density of one development unit per shoreline mile or less: 1317
3. Lakes with a development density of greater than 1 development unit per shore mile: 175
4. Lakes with existing development districts: 148

B. Lake access

1. Lakes with no two wheel drive access within 1 mile: 256
2. Lakes with no two wheel drive access within 1/2 mile: 524
3. Lakes with no two wheel drive access within 1/4 mile: 692
4. Lakes accessible to within 1/4 mile: 820

C. Development and access

1. Lakes with no shoreline development and no access within 1 mile: 236
2. Lakes with development of less than 1 development unit per mile and no access within 1/4 mile: 669
3. Lakes with development of less than 1 development unit per mile but accessible within 1/4 mile: 648

D. Public lands

1. Lakes with at least some public lands: 182
2. Lakes totally surrounded by public lands: 85

E. Protective zoning (refer to Commission's Land Use Districts and Standards for description of these zones)

1. Lakes designated as remote ponds: 169
2. Lakes with at least some P-RR, P-FW, or P-WL zoning: 744
3. Lakes with total P-RR, P-FW, or P-WL zoning: 302

F. Fringe

1. Lakes within 2 townships of recognized settlement or organized townships: 1114

G. Public water supplies and water quality

1. Lakes used as public water supply: 6
2. Number of water quality limiting lakes (out of 761 evaluated): 623

IV. MANAGEMENT CLASSIFICATION

Using the information from the resource and land use assessment, three management categories were developed that may have policy implications for the Commission:

- A. Least accessible undeveloped highest value lakes
- B. Accessible undeveloped lakes with especially high values
- C. Lakes potentially most suitable for development

The criteria for these categories and the lakes within these categories follow:

A. LEAST ACCESSIBLE UNDEVELOPED HIGHEST VALUE LAKES

1. DEFINITION: Lakes which warrant special management to maintain their existing values due to their relative inaccessibility, undeveloped condition and high value natural features.

2. CRITERIA:

- a. Relatively Undeveloped: Have less than one development unit per shore mile, taken as an average over the entire lake. (A development unit is defined as a single residence, small sporting camp cluster, or similar development.)
- b. Relatively Inaccessible: Have no road passable with a 2-wheel drive car within approximately 1/4 mile of the lake shore.
- c. High Resource Value: Be classified in the resource assessment as a lake with statewide significance (Value Class 1A or 1B.)

3. SUMMARY OF FINDINGS:

of lakes

- 29 Lakes meeting above criteria and meriting policy consideration
 - Total acres: 13,718 ac (1.8% of total area of lakes in study)
 - Average size: 473 ac (515 ac = average size of lakes in study)
- 39 Lakes meeting above criteria but already protected by remote pond zoning or public ownership

of lakes (cont)

35 Possible additions (8 lakes categorized as "accessible" or "developed" where findings have been questioned; 27 lakes where upward revisions to the resource ratings have been recommended which would qualify these lakes for the least accessible/undeveloped high value list. It is doubtful that all these lakes will qualify based on field checkings).

Note: This assumes that the 39 remote ponds or publicly owned ponds are adequately protected through current P-RR zoning or public ownership and thus while they may technically qualify as being in this category there is no need to consider instituting more protective policies for them.

4. LISTS

- a. Working list of least accessible undeveloped highest value lakes meriting policy consideration to maintain their existing values.
- b. Those on preliminary findings list where comments from reviewers suggest deletion due to inaccurate access findings
- c. Those where comments from reviewers suggest addition to list
- d. Those already protected by remote pond zoning or public ownership

*Resource ratings: 0 = outstanding; S = significant; P = present; m = missing information--unable to determine rating for particular resource value; these are minimum natural resource values--there may be other natural values which we are unaware of

B. ACCESSIBLE/UNDEVELOPED ESPECIALLY HIGH VALUE LAKES

1. DEFINITION: Lakes which warrant special management to maintain their existing values due to their especially high natural values, and undeveloped condition, even though they are readily accessible.

2. CRITERIA:

a. Relatively Undeveloped: Have less than one development unit per shore mile, taken as an average over the entire lake.

b. Relatively Accessible: Have a road passable with a 2-wheel drive car either to the lake or within 1/4 mile of the lake.

c. High Resource Value: A select subset of value class 1A lakes which have at least two of the following:

(1) An "outstanding" rating for fisheries

(2) An "outstanding" rating for scenic value

(3) An "outstanding" rating for shore character

(4) Especially noteworthy wildlife values (defined as lakes with an "outstanding" rating for wildlife when the rating was due to exceptional concentration and/or diversity of wildlife species.)

3. SUMMARY OF FINDINGS:

Number of Lakes

- | | |
|-----------|--|
| 21 | Lakes meeting above criteria <u>without</u> regard to wildlife values
Total acres: 22,194 ac (2.8% of total area of lakes in study)
Average size: 1,057 ac (515 ac = average size of lakes in study) |
| 5 | Lakes already adequately protected by easements or public ownership |
| 22 (max.) | Potential additions due to wildlife
(note: Wildlife analysis not completed; but it is not expected that more than 5-10 of these will qualify) |

4. LISTS

- a. List of especially high value accessible/undeveloped lakes meriting policy considerations to maintain their existing values (not including wildlife values).
- b. List of possible additions due to wildlife.
- c. Lakes on accessible/undeveloped high value list that are already adequately protected by public ownership or other measures.

Note: While not reflected on attached lists, should Beaver Pond (#3310) in Magalloway Plt be found to be accessible, it would be moved from the least accessible undeveloped list to the following working list of accessible undeveloped especially high value lakes.

C. LAKES POTENTIALLY MOST SUITABLE FOR DEVELOPMENT

1. DEFINITION: Lakes which are the best suited to accommodate additional development provided adequate consideration is given to existing features.
2. CRITERIA:
 - a. Water Quality
 - not water quality limiting (i.e., increased development will not likely result in unacceptable degradation of existing water quality).
 - not having additional lake specific water quality problems that would be exacerbated by additional shoreline development.
 - b. Location
 - to be consistent with the Commission's plan and standards and allow for orderly expansion of development, located within the fringe of the land Use Regulation Commission's jurisdiction (i.e., within two townships of the organized portion of the State or existing settlements with public services.)
 - c. Access
 - currently accessible by 2-wheel drive car (either to the lake or closer than 1/4 mile).
 - d. Conflicting Use
 - not totally zoned as P-FW, P-WL, or P-RR; (see Commission's Land Use Districts and Standards for explanation of zones)
 - not a municipal water supply which could be degraded by increased development
 - no major or unavoidable conflict with critical species or habitats;
 - no major or unavoidable conflict with recreational activities requiring an undeveloped setting.
 - e. Available Shoreline
 - no major conservation easements or public ownership which would preclude development on all or a substantial majority;
 - greater than 10 acres of surface area per existing dwelling unit (indicator of recreation carrying capacity);
 - undeveloped shore area adequate for 10 or more dwelling units (minimum of 1,500 feet);

f. Water Level Fluctuation

- no extreme water level fluctuation (i.e., dam regulated draw down) which makes shoreline unsuitable for development.

g. Regional Considerations

- it is the Commission's intention to provide a diversity of conditions in each region of the state: no region of the state is to have all or the great majority of the large lakes in the area identified as suitable for development.
- in such cases, certain lakes otherwise eligible were omitted from the list. Preference was given to retaining lakes which:
 - (1) are the least sensitive to water quality degradation;
 - (2) are closest to paved, all-season roads;
 - (3) are closest to existing development centers;
 - (4) have the least conflict between development and their resource significance

h. Landowner Equity

- lakes may be added to the development suitability list to assure equitable treatment of landowners; that is, if a landowner has one or more lakes in the categories being considered for further protection, the Commission will attempt to assure that other shorelines in the same ownership are designated as suitable for development. Such bodies of water will be the most suitable for development on the ownership; when no other lakes suitable for development occur in the ownership, the Commission will attempt to provide equitable consideration through other zoning or regulatory changes. (This criterion has not yet been applied and is not reflected in findings available to date.)

3. SUMMARY OF FINDINGS:

Number of lakes

42 Lakes on development suitability list
Total acres: 200,137 ac (25.7% of total area of lakes in study)
Average size: 4,765 ac (515 ac = average size of lakes in study)

Note: 14 lakes on this list merit special planning if high resource values are to be protected (i.e., value class 1A lakes)

4. LISTS

- a. Working list of lakes potentially most suitable for development
- b. Lakes included in this category which warrant special management plans

LAKES IN QUESTION

SQUARE L	1672	T16 R05 WELS	G	8150	0						S	S	1B	AC	DEV
----------	------	--------------	---	------	---	--	--	--	--	--	---	---	----	----	-----

Other lakes in this drainage upstream from Square Lake are already showing signs of stress from land uses within their drainages. Square Lake may be placed on this list when and if the Maine Department of Environmental Protection is able to show that increased shoreland development around Square Lake would not significantly contribute to the stresses already being placed on it from lakes upstream.

RICHARDSON L (UPPER)	3308	RICHARDSONTOWN TWP	D	4200	0	0	0	0	0	0			1A	AC	DEV
----------------------	------	--------------------	---	------	---	---	---	---	---	---	--	--	----	----	-----

The Commission is uncertain of the appropriateness of Upper Richardson as a lake potentially most suitable for development due to the extensive public ownership around this lake. This issue could be dealt with in a subsequent planning study of the class 1A lakes in this region.

*Resource ratings: 0 = outstanding; S = significant; P = present; m = missing information--unable to determine rating for particular resource value; these are minimum natural resource values--there may be other natural values which we are unaware of

*Resource ratings: 0 = outstanding; S = significant; P = present; M = missing information--unable to determine rating for particular resource value; these are minimum natural resource values--there may be other natural values which we are unaware of

V. MASTER LIST OF LAKES

JUNE 1, 1987

(alphabetical list showing findings for each lake)

LEGEND TO MASTER LIST OF LAKES

(see text for more detailed description of terms)

Resource Ratings:

FSH = Fisheries	O = Outstanding
WLD = Wildlife	S = Significant
SC = Scenic	P = Present
SH = Shore Character	m = missing information
BOT = Botanic	+,- = resource needing further field checking due to public comment
CLT = Cultural	(+ = positive comment; - = negative comment)
PHY = Physical	

note: these are minimum resource values--there may be other values
which we are unaware of

Resource Class:

- 1A** = lakes of statewide significance with two or more outstanding values
- 1B** = lakes of statewide significance with one outstanding value
- 2** = lakes of regional significance (with no outstanding values but at least one significant resource value)
- 3** = lakes of local or unknown significance (either had no significant or outstanding natural value or information was inadequate to make a determination)

Land Use:

- INAC** = Relatively Inaccessible--has no road passable with a 2-wheel drive car within approximately 1/4 mile of the lake shore
- AC** = Relatively Accessible
- UNDEV** = Relatively Undeveloped--has less than one development unit per shore mile, taken as an average over the entire lake (a development unit is defined as a single residence, small sporting camp cluster, or similar development)
- DEV** = Relatively Developed
- ?** = finding to be checked due to public comment

note: where DEV column is blank, shore length of that lake has not yet been determined so development density cannot be calculated

Management Class:

- LA/U** = least accessible, undeveloped high value lakes meriting policy consideration
- A/U** = accessible, undeveloped lakes with exceptional values meriting policy consideration
- PMSD** = lakes potentially most suitable for development

Note: Mooselookmeguntic Lake (3302) includes Cupsuptic Lake
Moosehead Lake (0390) includes the eight subregions of Moosehead
Pemadumcook Chain Lake (0982) includes North Twin, South Twin,
Ambejejus, and Elbow Lakes
Chesuncook Lake (0662) includes Caribou Lake

MAINE WILDLANDS LAKE ASSESSMENT
